## Environmental Policy

The team at **Miscisin Engineering and Consulting** (“ME&C”) are conscious of our social responsibilities with regards to helping the environment through our working practices. Our objective is not only to sustain our environment for our descendants but also to rehabilitate the damage previously done. We believe that our corporate responsibility goes beyond our own workplace and into the work that we provide our clients.

ME&C will strive to not only meet but exceed existing environmental laws and regulations, Thus going beyond the current status quo. We support and help develop technologies, approaches that will allow our family’s next generation to thrive.

This responsibility goes beyond our own company and to the companies that we do business with. As a engineering company we take great pride in assisting our clients with alternative and cost effective environmentally friendly solutions. We believe the growth of our company depends on our abilities to minimize or eliminate our impacts on our surroundings. Our ultimate success depends on the environment, without a beautiful country, our customers will cease to come. Our family’s and company’s future are interconnected with the future of our environment.

We believe if we follow the following specific ideals, we will make an impact:

### 1. Awareness and Commitment

Our policy towards the environment will be readily available and promoted to our clients. It can be found on our website at:

<https://www.MiscisinEngineering.com/Supplier-and-Client-Infomation>

### 2. Travel and Transport

ME&C will endeavor to reduce the impact on the environment where ever possible with respect to personnel transport.

We believe that we can achieve this by doing the following actions:

- Avoiding unnecessary travel and will use energy efficient vehicles and driving styles when possible.
- Seek and employ local products and services to reduce transport costs.
- Encourage the use of public transport, cycle or foot.

## Environmental Policy

### 3. Energy & Water Consumption

ME&C is committed to reducing carbon dioxide emissions both by attaining greater efficiency in total energy consumption and by continuing to examine the possibility of acquiring electricity from 'green' sources when finances permit, either through the purchase of 'green' electricity, or through an increased use of solar water heating, combined heat and power plants (CHP), or photo-voltaic.

Additionally, water consumption is becoming a larger and larger focus as we conduct business in the Southwest region of the United States. The area is experiencing an extended drought with increasing severity conditions. We believe we need to be conscious of water consumption and strive for the best practices in conservation.

We believe that we can achieve this by doing the following actions:

- We will make every effort to use water efficiently and avoid pollutants entering the drainage system.
- We will use energy efficient products wherever practical, and monitor usage to achieve minimum energy consumption.
- We will incorporate alternative energy into our long-term corporate plan.

### 4. Waste Generation and Management

ME&C will try to minimize the production of waste and pollution, including unnecessary packaging. We will implement measures to reduce the volume of waste generated and to increase the proportion of that waste which is recycled.

We believe that we can achieve this by doing the following actions:

- Partner with companies with the same objectives and that use renewable and recyclable material.
- Continue to provide methods and incentives for employees to recycle material when all possible

### 5. Materials and Resources

ME&C will try to minimize environmental impact with regard to sourcing materials and resources.

# Miscisin Engineering and Consulting

## Environmental Policy

We believe that we can achieve this by doing the following actions:

- We will avoid using materials which have an undesirable effect on the environment, and wherever possible use locally made recycled goods.
- We will try to use contractors who also share a commitment to the environment and take into account lifetime costs of materials when repairing, altering or rebuilding premises.
- We will maximize use of electronic communication and information storage as an alternative to paper and take into account the environmental quality and impact of food products and where possible to purchase food which has been grown locally.

### **6. Natural Environment**

ME&C will help to protect and enhance natural habitats and wildlife, take appropriate opportunities to enhance them and be sensitive to landscape issues during all phases of our work.

- We will look to minimize our impact and that of our clients on the local wildlife and to look for opportunities to work the local community in caring for our local environments.
- We will endeavor to help our community make educated decisions about our society's impact on the environment.

We look forward to working with our clients, customers, and suppliers to help the environment.

This policy applies to all employees, contractors and suppliers. We expect suppliers of goods and services to operate in accordance with this policy as outlined in our "Supplier Code of Conduct"
